Subject: Rescheduling of the 16th International Symposium on River Sedimentation (16th ISRS) to December 2025

Dear Colleagues and Participants,

Thank you for your continued support of the 16th International Symposium on River Sedimentation (ISRS), hosted by the University of Nebraska–Lincoln. We are pleased to have received over 100 high-quality abstracts addressing a wide range of topics, including sediment transport modeling, watershed management, and ecological restoration.

In recent months, evolving visa and entry policies—largely influenced by international tariff adjustments—have introduced uncertainties for many of our participants. After careful monitoring and deliberation, the organizing committee has made the difficult decision to reschedule the symposium to ensure broader accessibility and participation.

We are pleased to announce that the 16th ISRS will now be held from **December 14–17, 2025**. In light of this change, we have extended the abstract submission deadline to **September 30, 2025**. Acceptance notifications will be sent out shortly, and updated deadlines and details will be posted on our official website.

We remain committed to making the 16th ISRS a dynamic and enriching platform for the exchange of ideas, research, and innovations in sediment science and management.

We sincerely appreciate your understanding and continued engagement. For any urgent questions, please feel free to contact us at jguo2@unl.edu or waser@iwhr.com.

Warm regards,

Dr. Junke Guo

Associate Professor of Water Resources Engineering
Department of Civil and Environmental Engineering
College of Engineering
University of Nebraska–Lincoln

CC: Dr. Tian C. Zhang, Professor of Civil Engineering
Dr. Shannon Bartel-Hunt, Chair of Civil Engineering
Dr. Lance Perez, Dean of Engineering
